

Laravel 4

Artisan Commands for Laravel Migrations

(Created by Wayne Leiser 04-09-13 – Updated 06-21-13)

This document is intended to be a walk through for the setup process of migrations using artisan in Laravel version 4.

This document presumes that you have already set up a database and configured it in the database.php located: %laravel-directory%/app/config/database.php.

This document also presumes that you know how to access the laravel installation directory by the command line and that you have access to the php command.

This document was created by a beginner for beginners.
