

Laravel 4

Creating a webpage using a Resourceful Controller, Route, View, Model, Master Layout and Sections within the View.

(Created by Wayne Leiser 05-13-13 - Updated: 06-02-13)

This document is intended to be a walk through for the creation process of a basic webpage using a Master Layout, View, Sections within a view, Resourceful Controller, Route, Model.

This document presumes that Laravel is already set up and a database has been configured in the database.php located: %laravel-directory%/app/config/database.php.

This document also presumes that you know how to access the laravel installation directory by the command line and that you have access to the php command.
