

# Laravel 4 Flowchart Database Seeding For the Laravel 4 framework.

(Created by Wayne Leiser) 04-12-13 – Updated: 05-06-13

This document is not intended to show every command available when seeding a database. This document presumes you have no knowledge of database seeding. This will presume that a database has already been set up and the database.php file has already been configured. This document presumes you already know what artisan is and are familiar with it.
